Software Engineer, AI & Agent Systems

EDUCATION

California State University, Sacramento, Sacramento, CA | *B.S. Computer Science* | December 2025

Cumulative GPA: 3.88/4.0; Magna Cum Laude; Dean's List 2023–2025

Relevant Coursework: Software Engineering; Operating Systems; Data Structures & Algorithms; Database Management; Computer System Attacks and Countermeasures

WORK EXPERIENCE

CE Showroom, Inc., Roseville, CA | *Software Developer* | July 2026 – October 2026

- Built an AI-assisted endpoint onboarding pipeline. An orchestrator agent directed scoped sub-agents to resolve, validate, and build ingestion and mapping configs, cutting onboarding from ~15 min of manual work per endpoint to parallel batches of 8–10 endpoints in ~15 min. Other developers on the team adopted it.
- Added an audit agent that validated generated configs against existing ones, halted on unsupported cases, and updated the related Jira tickets with findings.
- Integrated 60+ data tables from two e-commerce marketplace API families into an AWS lakehouse in ~12 weeks, using Python, SQL, Lambda, SQS, Step Functions, S3, DynamoDB, Aurora RDS, and Terraform.
- Owned multi-marketplace support end-to-end: extended multi-tenant connectors to process every marketplace per tenant and carried marketplace identifiers through the pipeline as deduplication keys, scoped so other API families were unaffected.
- Served as the developers' primary liaison to the CEO, breaking feature requests into scoped tickets and explaining technical trade-offs to non-technical stakeholders.

Hackingtons, Rocklin, CA | *Code Instructor* | May 2025 – September 2025

- Provided real-time technical troubleshooting and code reviews in JavaScript and Python during live coding sessions with ~30 students weekly, maintaining a 100% project completion rate.

CSU Sacramento, Sacramento, CA | *Peer Assisted Learning Facilitator* | August 2023 – May 2024

PROJECTS

Skin Cancer Detection App (Hornet Hacks Hackathon, Project Lead) | March 2025 | Demo | Code

- Architected a Python image-processing pipeline integrating HuggingFace ML models, achieving 80% classification accuracy and delivering a functional MVP with a responsive React and Tailwind CSS frontend.
- Directed a 7-person team under a 48-hour deadline, establishing a CI/CD pipeline via GitHub Actions that allowed simultaneous frontend and ML-model integration.

PickDays | pickdays.app | 2026

- Built and shipped a live group scheduling and availability web app with React, Vite, and TypeScript on Cloudflare Workers, Pages, and D1.
- Implemented a nightly scheduled Worker that purges expired events and participant data, plus server-side participant caps and input validation.

SKILLS

AI & Agents: Multi-agent orchestration (orchestrator, sub-agent, and audit-agent patterns), AI-assisted development, HuggingFace models

Languages & Frameworks: Python (Flask/FastAPI), SQL, JavaScript/TypeScript (Node, React, Vue), Java (Spring Boot)

Cloud & Data: AWS (Lambda, SQS, Step Functions, S3, DynamoDB, Aurora RDS), Terraform, Cloudflare Workers & D1, PostgreSQL, MongoDB, Docker, GitHub Actions, Linux
